Install nodejs program as windows service by nssm

🖰 2018-05-29 | 💆 2018-09-28 | 🗩 0 Comments

Steps to install windows service

- 1. Create a start.bat file with content npm start
- 2. Download nssm
- 3. Extract it and go to nssm/win64 folder
- 4. Type nssm install service-name from command prompt
- 5. Select start.bat as Application Path, you could also add your startup Arguments here

- 6. Start service with nssm start service-name
- 7. You could find it already registered as windows service:)

NSSM commands reference

You could type nssm anytime to see this document

```
1
   M:\nssm-2.24\win64>nssm
   NSSM: The non-sucking service manager
 2
   Version 2.24 64-bit, 2014-08-31
 3
    Usage: nssm <option> [<args> ...]
 4
 5
    To show service installation GUI:
 6
 7
            nssm install [<servicename>]
 8
9
10
    To install a service without confirmation:
11
12
            nssm install <servicename> <app> [<args> ...]
13
14
    To show service editing GUI:
15
16
            nssm edit <servicename>
17
18
    To retrieve or edit service parameters directly:
19
20
            nssm get <servicename> <parameter> [<subparameter>]
21
22
            nssm set <servicename> <parameter> [<subparameter>] <value>
23
24
            nssm reset <servicename> <parameter> [<subparameter>]
25
26
    To show service removal GUI:
27
28
            nssm remove [<servicename>]
29
30
    To remove a service without confirmation:
31
32
            nssm remove <servicename> confirm
33
34
    To manage a service:
35
36
            nssm start <servicename>
37
38
            nssm stop <servicename>
39
40
            nssm restart <servicename>
41
```
